Preshrunk Ponderings and Rumpled Rememberings Jan 10 2021 Preshrunk Ponderings and Rumpled

Rememberings is a collection of folksy essays on low-cost housing and its relationship to homelessness, on public transportation and its relationships to independence of movement and quality of life, on

artifice and institutionalism in higher education, and on the tinkering mind and creative science. The author draws from his experiences in living life fully from the low-end of the economic scale and offers uncommon perspectives on what readers may find common all around us. Reasonable analyses of problems are intended less toward offerings of solutions than to provoke thought and stimulate discussion. There are no overt polemics or hard-line politics that might stir the dental profession to action from widespread gnashing of teeth. These are just amiable discourses on a few diverse topics to animate some dimension to the prevailing flat dullness and torpor. They are easy reading for a few lazy hours.

*Using Physical Science Gadgets and Gizmos, Grades 6-8* Dec 01 2022 What student—or teacher—can resist the chance to experiment with Rocket Launchers, Sound Pipes, Drinking Birds, Dropper Poppers, and more? The 35 experiments in *Using Physical Science Gadgets and Gizmos, Grades 6–8*, cover topics including pressure and force, thermodynamics, energy, light and color, resonance, and buoyancy. The authors say there are three good reasons to buy this book: 1. To improve your students' thinking skills and problem-solving abilities. 2. To get easy-to-perform experiments that engage students in the topic. 3. To make your physics lessons waaaaay more cool. The phenomenon-

based learning (PBL) approach used by the authors—two Finnish teachers and a U.S. professor—is as educational as the experiments are attention-grabbing. Instead of putting the theory before the application, PBL encourages students to first experience how the gadgets work and then grow curious enough to find out why. Students engage in the activities not as a task to be completed but as exploration and discovery. The idea is to help your students go beyond simply memorizing physical science facts. Using Physical Science Gadgets and Gizmos can help them learn broader concepts, useful thinking skills, and science and engineering practices (as defined by the Next Generation Science Standards). And—thanks to those Sound Pipes and Dropper Poppers—both your students and you will have some serious fun. **Connected Minds** Oct 19 2021 The theme for this volume is social cognition, construed from a psychological and collective point of view. From the psychological point of view, the question is to understand how the human mind processes social

information; how it encodes, stores and uses it in the social context. From a collective point of view, the question is to understand how individual cognition is influenced (improved, increased or impaired) by social interactions, for instance in communicating and collaborating with intelligent agents. These two dimensions of social cognition are obviously interdependent: the psychological dimension makes the collective dimension possible, which can in return modify the psychological dimension. The book is divided into four parts. The first part is about socio-cognitive skills. Among those, we count face recognition, imitation learning, embodied social interaction, cheater detection and psychological concept acquisition. The second part is about persons and memories: stereotypes, attraction judgements and impression formation are the subjects at hand. The third part is about understanding each other. A key part of that understanding is the motor system (whether or not we see it as a “mirror”), but community membership itself can also contribute to our understanding of others. The fourth and final part is about social cognition in societies. This section is unified by the common goal of understand how social cognition actually influences the structure of different societies, whether whole cultures, specific social networks, rural communities or even groups of

caterpillars!

**The Only Ones** Aug 24 2019 \*10 Favorite Books of the Year (2015) —O, The Oprah Magazine \*Best science fiction and fantasy books of 2015 —The Washington Post \*One of the most anticipated books of 2015 —Dazed & Confused, BuzzFeed Inez wanders a post-pandemic world, strangely immune to disease, making her living by volunteering as a test subject. She is hired to provide genetic material to a grief-stricken, affluent mother, who lost all four of her daughters within four short weeks. This experimental genetic work is policed by a hazy network of governmental Ethics committees, and threatened by the Knights of Life, religious zealots who raze the rural farms where much of this experimentation is done. When the mother backs out at the last minute, Inez is left responsible for the product, which in this case is a baby girl, Ani. Inez must protect Ani, who is a scientific

breakthrough, keeping her alive, dodging authorities and religious fanatics, and trying to provide Ani with the childhood that Inez never had, which means a stable home and an education. With a stylish voice, *The Only Ones* is a time-old story, tender and iconic, about how much we love our children, however they come, as well as a sly commentary on class, politics, and the complexities of reproductive technology.

"Breathtaking. D. James' *The Children of Men*. It's that good, and that important, and that heartbreakingly beautiful." —NPR

**Rules of the Campfire** Oct 07 2020 If you woke up one day and realized you had memories from more than seventy lives, fluid in every language you'd ever spoken, and recalled all the texts you'd ever read, would you wonder why? It took Asitr forty years to discover the why. Soon after, he appears as a guest on a radio talk show to bait traps with the telling of stories. He tells tales about his life as one of the world's most popular and quickly forgotten celebrities — of gardening for the Prophet Enoch, eavesdropping on Satan and Baal Zebub, and living between lives in a lost world. They sounded like the tall tales of a crazy man. Twenty years later, a John Doe is found, naked and shivering, on the grounds of the Harbinger Psychiatric Institute, clutching a six-inch orb of blue glass and anxious to tell his own story. Is it a tale of organized insanity inspired by Asitr's radio appearance? Dr. Henry Milton has what looks like an

easy assignment: he has twenty-four hours to evaluate the John Doe and refer him for processing. But John Doe has a timetable of his own. He has less than forty-eight hours to convince Dr. Milton to suspend his disbelief in a supernatural world where activities swirl around us unseen and mingle within our own natural realm.

**Gadgets and Gizmos** Dec 21 2021 Gadgets and Gizmos-how to tell if you own a real business or just an expensive hobby-was written for all creators and entrepreneurs who dare to dream, innovate, experiment and produce services and products that transform our lives as well as make a profit. Think about just the last few years-our ability to seamlessly communicate at very low cost with a worldwide community via email, websites, messaging, crowdfunding and crowd sourcing, skype and zoom, as well as a huge diorama of social media to select from. How about the rise of the sharing and gig economies-how many of us can make a living or at least add to our incomes using these services invented by (mostly) young people, but open to every age group willing to

learn new ways of doing business? Next, we are going to see an explosion in productivity through AI. Many entrepreneurs quit before their sales are given a chance to really takeoff. This is because a) they start listening to Monday morning quarterbacks who disparage them and their company and b) they don't have a coach/mentor/teacher/adviser who can counteract this by telling them they are on the right track/keep growing (or when to pivot if they are on the wrong one). But like many aspects of entrepreneurship, things are never really this simple-there is always ambiguity. So, how do you recognize when you own a Zombie company or when a project, product, service or division of the organization is dead and needs to be pruned from the herd? This handbook answers this question and a lot more... "I believe in mentors. If we all lived to be 300, then we wouldn't need them-we could learn everything on our own. Coaches like Prof Bruce are your shortcut to success-they are the least costly, highest ROI investment you will ever make," Fab Di Franco, Technology Executive+++ Another reason I wrote this handbook is because I am always pushing myself and my clients to prove their concepts before they spend a ton of time, money and sweat launching a product or service that, it turns out, the marketplace rejects. The market is always right, even when it's wrong. This means-don't substitute your own

views/opinions for what the market demands, something that can be proven/ demonstrated. You are NOT the market. In this learning outcome handbook, you'll learn, for example, how Ryan North failed to raise \$20,000 on Kickstarter for his proposed book project-To Be Or Not To Be: That Is The Adventure. Indeed, Ryan failed miserably to raise \$20k. Instead, he successfully ended up with 15,352 backers who between them pledged \$580,905 USD to help bring his project to life. At the time, it was the #1 most funded publishing project on Kickstarter ever. When this happens, you no longer have to guess if your product or service will be a success nor do you have to risk anything but your own time to find out...+++I've been known to (accused of) putting the cart in front of the horse. Why? Because once you have three sales (of just about anything) a) you have "proven" your concept, b) it forces you to accelerate delivery and c) no matter how smart you are, as soon as you come into contact with a potential client, s/he will ask you questions/challenge you in ways that no matter how much time you spent pre-planning your rollout of a new product or service, you could never anticipate. +++Here's a 48-second video I did riding around with my friend Walter Willett, Horse Country Campground founder, [https://youtu.be/k7a3p6O\\_sn0](https://youtu.be/k7a3p6O_sn0). Its title is: Don't know anything about business? "Don't worry. Your customers

and clients will teach you all you need to know," Walter says, who knew zilch about running Horse Country Campground when he started. Prof Bruce

Using some old hardware, a laptop, and some toolboxes full of electronics parts, you will follow along and build eight gizmos with Cade and Elle that will help them escape from Gemini Station. The hardware is Arduino. Each new challenge opens a new area of Arduino and basic electronics knowledge. You'll be taken incrementally from a simple task such as turning on a light through to a complex combination of microcontroller, electronic components, and software programming.
