Tourism, Ethnic Diversity and the City fills a gap in existing research in terms of how immigration relates to urban tourism and investigates the new theoretical insights and challenges for empirical research using informative case studies drawn from several advanced economies in Europe, North America and Australia. This enlightening book clearly explores the frontiers of knowledge on the interrelationship between tourism, migration, ethnic diversity and place. Exploring further the manifestations of ethnic diversity that have been commodified by immigrants in gateway cities, questioning how these expressions of culture can be transformed into vehicles for further developing the urban tourism economy. Tourism, Ethnic Diversity and the City presents a multidisciplinary approach drawing on key names from the field of geography, sociology, planning and political science and will appeal to those with an interest in any of these areas. With the changing landscape of the transport sector, there are also alternative powertrain systems on offer that can run independently of or in conjunction with the internal combustion (IC) engine. This shift has actually helped the industry gain traction with the IC Engine market projected to grow at 4.67% CAGR during the forecast period 2019-2025. It continues to meet both requirements and challenges through continual technology advancement and innovation from the latest research. With this in mind, the contributions in Internal Combustion Engines and Powertrain Systems for Future Transport 2019 not only cover the particular issues for the IC engine market but also reflect the impact of alternative powertrains on the propulsion industry. The main topics include: • Engines for hybrid powertrains and electrification • IC engines • Fuel cells • E-machines • Air-path and other technologies achieving performance and fuel economy benefits • Advances and improvements in combustion and ignition systems • Emissions regulation and their control by engine and after-treatment • Developments in real-world driving cycles • Advanced boosting systems • Connected powertrains (AI) • Electrification opportunities • Energy conversion and recovery systems • Modified or novel engine cycles • IC engines for heavy duty and off highway Internal Combustion Engines and Powertrain Systems for Future Transport 2019 provides a forum for IC engine, fuels and powertrain experts, and looks closely at developments in powertrain technology required to meet the demands of the low carbon economy and global competition in all sectors of the transportation, off-highway and stationary power industries. This guide is a general summary that explains certain aspects of the Medicare Program, but is not a legal document. Introducing a text that provides guidance for the clinician in the assessment and management of all forms of strabismus in both adults and children. Focusing on clinical management, this text puts into perspective modern diagnostic tests, and discusses the range of treatments available once a case of strabismus has been evaluated. Covers both standard and innovative surgical techniques through the use of color intraoperative photographs. Also discusses principles of surgical management and the different surgical procedures commonly used in the management of these complex problems. Complete review of the entire field of strabismus Explores the full

range of clinical examination techniques and laboratory testing procedures Offers clear, step-by-step guidance on sophisticated evaluation procedures, including those for parietic and restrictive strabismus Reviews the theory and principles behind practice Provides insights into the clinical decision-making process Comprehensive and up-to-date coverage of surgical techniques Illustrations and colour intraoperative photographs The construction industry is becoming increasingly aware of the need to adopt a holistic approach to the design, building, and disposal of structures. With 60 per cent of the total construction budget in most developed countries being spent on repair and maintenance, there is an obvious need to design for reliability and durability, with more carefully planned maintenance and repair schedules. One important facet is to look at how costs are distributed and spent during the lifetime of a structure: an approach known as life cycle costing, which has the ultimate aim of minimising total lifetime expenditure. As an example, choosing an inexpensive coating for steelwork may require maintenance every three years, whereas a coating which is more expensive may require repairing only once per decade. It is a question of balance - taking the lifetime costs of the structure into consideration. This new book provides an insight into how whole life costing is affecting our approach to designing, building, maintaining and disposing of structures. The book is written for consulting engineers in the fields of civil and structural engineering, building designers, architects, quantity surveyors, refurbishing specialists, as well as practising civil and structural engineers engaged in planning, design, construction, repair and refurbishment of structures. From the archives of the Library of Congress: "An irresistible treasury for book and library lovers." —Booklist (starred review) The Library of Congress brings book lovers an enriching tribute to the power of the written word and to the history of our most beloved books. The illustrations are amazing: luscious reproductions of dozens of cards, lists, covers, title pages, and other images guaranteed to bring a wistful gleam to the book nerd's eye." —The Washington Post The Essential Guide that Introduced Fractals to the World Explore the wondrously complex repeating shapes of the natural world in The Fractal Geometry of Nature. Written in a style that is accessible to a wide audience, computer scientist, professor, mathematician, economist, and visionary Benoit B Mandelbrot's fascinating work has inspired popular interest in the geometry inherent in the natural world. Unlike the squares, circles, spheres, and cones of fundamental geometry, nature has rough edges and no straight lines or perfect curves. Mandelbrot observed that, even with this roughness, there still exists a kind of symmetry, which he dedicated his work to document and study. This became the basis for his development of a new kind of geometry; indeed, he coined the term "fractal." Mandelbrot spent 35 years with IBM, which allowed him access to the level of computing power that would enable him to manipulate computer-generated images and develop his theory of a geometry found throughout our natural environment. He was among the first to use computer graphics to illustrate and test these kinds of concepts, demonstrating that natural phenomena which appear to be rough or chaotic actually have a certain degree of order and predictability. This definitive overview builds on Mandelbrot's 1977 work, Fractals: Form, Chance and Dimension (also published by Echo Point Books), revealing an in depth look at this still-emerging field. Richly illustrated and presented in an engaging manner which embraces geometric and visual dimensions interspersed with aspects of theory, this book will inspire curiosity and wonder in artists, mathematicians and naturalists alike. This book is also available from Echo Point Books in hardcover (ISBN 1648370403). Be sure to check out Benoit Mandelbrot's other definitive work, also available from Echo Point books: Fractals: Form, Chance and Dimension (use the web address <https://www.amazon.com/dp/1635619025/>). Now approaching its tenth year, this hugely successful book presents an unusual attempt to publicise the field of Complex Dynamics. The text was originally conceived as a

supplemented catalogue to the exhibition "Frontiers of Chaos", seen in Europe and the United States, and describes the context and meaning of these fascinating images. A total of 184 illustrations - including 88 full-colour pictures of Julia sets - are suggestive of a coffee-table book. However, the invited contributions which round off the book lend the text the required formality. Benoit Mandelbrot gives a very personal account, in his idiosyncratic self-centred style, of his discovery of the fractals named after him and Adrien Douady explains the solved and unsolved problems relating to this amusingly complex set. This valuable reference delineates the ground water quality concerns associated with the planning and usage of septic tank systems. Septic tank systems represent a significant source of ground water pollution in the United States. Since many existing systems are exceeding their design life by several-fold, the usage of synthetic organic chemicals in the household and for system cleaning is increasing, and larger-scale systems are being designed and used. This collection of texts is a first step towards providing a theoretical and methodological platform for the study of social encounters. The social encounter is a particular sort of concept, focusing on confusion, tension, trauma, and possibly social change that may emerge in situations of contact when people and things interact. A social encounter is, however, not only about negotiation or contemplating existence, but is rather about what happens when people interact actively, when they involve themselves with people and materialities, when they move around, fetch things, use things, leave things etc. The repeated social encounter is often a confrontation with something, such as an opinion, a performance, or with materialities and the effects are often unpredictable. Encounters may reproduce a social pattern, but also contain potential for transformation and change. Such varied responses to encounters will certainly have effects on the archaeological record. The primary focus of the volume is the effects and processes involved in intra- and inter-societal encounters. The collection hence fills a theoretical and methodological gap in the study of the encounter in archaeology. There is a need for elaborating aspects of postcolonial theory in order to develop new ways of approaching the archaeological record. The articles of this volume include examples from various regions and time periods. They range from Scandinavian Stone Age, through Buddhist social practices of the first millennium AD, Maya warfare and ideology, to Aboriginal-European encounters in 20th century Australia. Per Cornell (PhD, Ass. Prof.) is currently lecturer at the Department of archaeology, University of Gothenburg. Cornell has been involved in extensive field-work in Latin America and current research topics include settlement archaeology, formation processes and social theory. Among his recent books are Local, Regional, Global, co-edited with Per Stenborg (Gotarc, 2004). "Behind Photographs began as the personal quest of photographer Tim Mantoani to document and preserve noted photographers together with their images. "We have come to a point in history where we are losing both photographic recording mediums photographic recording mediums and iconic photographers," Mantoani comments. "While many people are familiar with iconic photographs, the general public has no idea of who created them. This book became a means to do that, the photographer and their photograph in one image."--Publisher's website, <https://www.channelphotographics.com/behindphotographs.php>, viewed February 6, 2012.
