Minimalism Beyond the Nurnberg Funnel Apr 23 2022 Minimalism is an action- and task-oriented approach to instruction and documentation that emphasizes the importance of realistic activities and experiences for effective learning and information seeking. Since 1990, when the approach was defined in John Carroll's The Nurnberg Funnel, much work has been done to apply, refine, and broaden the minimalist approach to technical communication. This volume presents fourteen major contributions to the current theory and practice of minimalism. Contributors evaluate the development of minimalism up to now, analyze the acceptance of minimalism by the mainstream technical communications community, report on

specific innovations and investigations, and discuss future challenges and directions. The book also includes an appendix containing a bibliography of published research and development work on minimalism since 1990. Contributors: Tricia Anson, R. John Brockmann, John M. Carroll, Steve Draper, David K. Farkas, JoAnn T. Hackos, Robert R. Johnson, Greg Kearsley, Barbara Mirel, Janice (Ginny) Redish, Stephanie Rosenbaum, Karl L. Smart, Hans van der Meij. Accessibility in Text and Discourse Processing Jan 09 2021 This special issue shows how accessibility phenomena need to be studied from a linguistic and psycholinguistic angle, and in the latter case from interpretation, as well as production. The contributions augment the growing knowledge of accessibility in text and discourse processing. They also illuminate how accessibility is marked in a text or a discourse, how readers and listeners respond to those markings, and how mental representations evolve and change as a direct result of accessibility. The editors hope is that the text affects the readers' representations in ways that linguists and psycholinguists theorize as beneficial.
