The book discusses the modeling of induction and synchronous machines aimed at the synthesis of dedicated control strategies. The first part focuses on induction machines (IMs), and starts with the analysis of the principle of operation, which is based on the induction phenomenon. It then establishes the a-b-c model, assuming a sinusoidal spatial repartition of the air gap flux density, a linear magnetic circuit, and constant phase resistors. The a-b-c model enables the establishment of a state representation of the induction machine. Then, the Park transformation is introduced and applied to the IM a-b-c model, leading to its Park one, which is then used to analyze the IM steady-state operation. The chapter also includes a case study dealing with the doubly fed induction machine, which is widely integrated in wind power generating systems. Following the introduction of the continuous development of synchronous machines (SMs), the second part establishes the a-b-c model for salient pole machines. Then, the Park transformation is applied to the established a-b-c model, leading to the Park one. The section highlights the formulation and analysis of the electromagnetic torque, with its synchronizing and reluctant components investigated in terms of the torque angle. Subsequently, it characterizes the operation at (i) maximum torque and (ii) unity power factor before focusing on the flux weakening approaches that could be implemented in SMs considering both smooth and salient pole topologies. Lastly, it presents a case study dealing with an investigation of the main features of the electric drive unit of a hybrid propulsion system and the possibility of their improvement, with an emphasis on the extension of the flux weakening range. This title introduces readers to the features, brand history, and sponsored motocross athletes of Yamaha dirt bikes. This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets The rapid takeoff of the continent-sized national economies and the increasing expense of extraction have led to strong tensions in petrol prices and a race towards alternative driving systems. This book analyses the emergence of a second automobile revolution through the trajectories of automobile firms since the nineties. TESOL and the Cult of Speed in the Age of Neoliberal Mobility argues that because the nexus between TESOL and the cult of speed in an age of increased neoliberal mobility has not yet been explicitly unpacked, discussed, identified and theorized, the implications of this socio-economic phenomenon for TESOL policies, curricula, pedagogies and practices have been overlooked. Through the presentation of several qualitative case studies, the book illustrates the social dynamics of speed and its key aspects (i.e., the materiality and the politics of time) in different TESOL contexts, including Saudi Arabia, the USA and Canada. The aim in presenting these diverse case studies was to craft a collection of responses, which, when put together, could offer new insights into the TESOL academic community. The book examines the ways in which the cult of speed has been envisioned, celebrated, negotiated with, enacted and justified by the various actors within the contemporary field of TESOL. It also investigates the new language teaching practices and forms the cult of speed in TESOL has generated and is generating. TESOL and the Cult of Speed in the Age of Neoliberal Mobility will be of interest to TESOL/applied linguistics educators, students, policy makers, administrators, employers and the wider community, and it is hoped will give them ideas about how to deal with today's culture of fast movement in the globalized higher education landscape. In How to Super Tune and Modify Holley Carburetors, best selling author Vizard explains the science, the function, and most importantly, the tuning expertise required to get your Holley carburetor to perform its best for your performance application. Vibration of Mechanical Systems uses a revolutionary approach to teaching the fascinating subject of vibration. Many, if not most, machinery failures have vibration as the root cause. It is hence imperative that mechanical, aerospace, naval, and structural engineers get a firm background in the theory and practice of vibrational analysis and design. This text is aimed at senior undergraduate and beginning graduate students. It uses ample design problems to illustrate vibrations concepts and theory. Most of the concepts are introduced by way of an example problem, which serves to motivate and arouse interest before the theory is presented. It imparts a clear understanding of vibration theory, its mathematics, and its relevance to engineering. Both students and practicing engineers will benefit enormously from well-integrated computer tools, simulations, and many practical examples included in this text. MICROSOFT OFFICE 2010: INTRODUCTORY provides a project-based, step-by-step approach to teaching the Office 2007 applications. Childhood trauma and abuse have repercussions that can last a lifetime, interfering with our ability to trust, hope, and love, forever casting a shadow over our perception of the world ... and of ourselves. What's worse is that so many people will spend their entire lives suffering in silence, afraid, ashamed, and feeling alone even when surrounded by family or friends Nuta Miller was one of those people for most of her life. Having suffered horribly at the hands of her mother and step-father, she felt desperately alone-helpless and voiceless. Fortunately, prior to those abusive years, her grandparents had instilled in her a strong foundation of love and generosity, and a deep and abiding faith that helped her to survive. With their support, she was able to recognize and embrace the blessings that inevitably came her way. So she was able to become the sort of mother and protector for her own children that she wished she'd had herself. Though everyone's story is different, by sharing we exemplify the road to recovery for others to follow. Offering hope and perseverance, Resurrection of Innocence hopes to show that we are never truly alone.
